

# CONSTRUCTION UPDATE

## MARCH 4, 2009

### Work Has Begun!

Today we have evidence of activity out near the new Cabin Village site. George Nice and Sons vehicles are out at the Three Crosses in the snow, and several workers are checking the flags and markers to figure out exactly where to clear. Once they determine the boundaries, they can start putting up erosion control fencing and then they can begin clearing.

Steve Driver and Anthony Eshleman are also here from Terra Engineering to do some final site survey checks. They have this gadget that communicates with 13 satellites to determine the elevation and location of different points in the site. Steve can tell you how it works.

Pray for the safety of the workers and that they would sense the Lord's presence as they begin this special project! Rejoice with us as we see the Lord's work moving forward!

Ok, so it's just a pickup, but we know they have bigger trucks coming.....

Steve, Anthony and "the gadget"

**Keep checking the website for more updates!**
